INTRODUCTION

Soybean cultivar performance tests are conducted each year in Arkansas by the University of Arkansas Division of Agriculture. The tests provide information to companies developing cultivars and/or marketing seed within the State and aid the Arkansas Cooperative Extension Service in formulating cultivar recommendations for soybean producers.

The 2003 soybean cultivar performance tests were conducted at the Northeast Research and Extension Center (NEREC) at Keiser, the Cotton Branch Station (CBS) near Marianna, the Rice Research and Extension Center (RREC) near Stuttgart, the Southeast Research and Extension Center - Rohwer Division (SEREC-RD) near Rohwer and the Vegetable Substation (VSS) near Kibler. A test location map can be found inside the back cover.

METHODS

Soybean cultivars were entered by commercial seed companies and state and federal institutions. Recommended cultural practices were used at each location and all data were taken from a uniform set of instructions.

Cultivars were grouped by maturity groups based on information provided by the originating company or institution. To facilitate field operations, and to allow for fairer comparisons between cultivars, entries in the Group IV and V Commercial Cultivar Tests (CCT) were separated into "early" cultivars and "late" cultivars. Cultivars in the “early” Group IV test had a relative maturity range of 4.0 to 4.7 and in the Group V test, a range of 5.0 to 5.6. Cultivars in the “late” Group IV test had a relative maturity range of 4.8 or 4.9 and in the “late” Group V test, a range of 5.5 to 6.2.

Early planted tests (EPT) were established at NEREC, SEBS, BBF, and VSS. As with the CCT IVs and Vs, entries in the EPT were subdivided into "early" and "late" cultivars.

Within each test, entries were arranged as a randomized complete block design with three replications. Plots in all tests were 4 or 5 rows wide depending on between-row spacing and 20 feet in length. Seeds were packaged for recommended planting rates and were planted with a cone planter. Specific location and cultural practice information accompanies each table.

Interior rows of each plot were harvested for yield determination after ends were trimmed. Percent moisture was recorded for all harvested seed of early-planted tests and plot weights were adjusted to thirteen percent moisture. Harvested seeds of all other tests were allowed to dry to uniform moisture before weighing, and weights were converted to yield in bushels per acre (bu/A).

Plots were visually rated for shattering and lodging. Shattering ratings were carried out on border rows according to the following scale:

1. No shattering
2. 1-3% shattered
3. 4-8% shattered
4. 9-19% shattered
5. 20% or more shattered

Lodging ratings were recorded on a scale from 1 to 5 based on the following criteria:

1. Almost all plants erect
2. Either all plants leaning slightly, or a few plants down
3. Either all plants leaning moderately, or 25-50% of the plants down
4. Either all plants leaning considerably, or 50-80% of the plants down
5. All plants down badly

Average plant height was recorded in inches for each plot. Tests were established at the Main Experiment Station at Fayetteville on a Taloka silt loam soil to evaluate cultivar sensitivity to the herbicide propanil. Propanil was applied over-the-top of one-half of each plot at 0.75 lb active ingredient/A (0.25X recommended rate) when plants were in the V4 to V5 growth stage.
to simulate drift from rice fields. Plots were visually rated 7 and 21 days after propanil application by Marilyn McClelland. Cultivars were screened for tolerance to soil chloride in greenhouse tests conducted by Dr. J.D. Widick, ASU, Jonesboro.
Table 1. Yields of Early Planted Soybean Cultivars at All locations, 2003.

Table 1. Yields of Early Planted Soybean Cultivars at All locations, 2003\textsuperscript{1}, Continued.

\begin{itemize}
\item[1] Irrigated early planted tests were also established in a Southwest Arkansas grower’s field, but were abandoned due to a herbicide application error.
\item[2] Heavy rains and standing water caused poor uniformity in this test, and therefore the results will not be reported.
\item[3] Tests were planted at this location on April 11, but were abandoned due to poor stands resulting from heavy rains. The tests were replanted on May 27. These results are from that planting date.
\end{itemize}

¹AAES Research Series 511 University of Arkansas, Division of Agriculture, Variety Testing Program.
Table 2. Performance of Nonirrigated Early Planted Soybean Cultivars, Northeast Research and Extension Center, Keiser, AR, 2003¹, Continued.

¹ Heavy rains and standing water caused poor uniformity in the Early Maturing Cultivars (RM 4.7 or less) at this location. The results are not reported.

AAES Research Series 511 University of Arkansas, Division of Agriculture, Variety Testing Program.
Table 3. Performance of Irrigated Early Planted Soybean Cultivars, Southeast Research and Extension Center, Rohwer, AR, 2003\(^1\), Continued.

\(^1\) Tests were planted at this location on April 11, but were abandoned due to poor stands resulting from heavy rains. The tests were replanted on May 27. These results are from that planting date.

\(^2\) Three year averages were calculated from the years 2000, 2002, and 2003. There were no data reported for this location in 2001.

- Soil Series: Sharkey clay
- Previous Crop: Soybean
- Row Width: 19 inches
- Fertilizer Applied: None
- Lime Applied: None
- Planting Date: 5-27-03
- Herbicide Application: 1.4 oz./A Scepter + 2.0 pts./A Prowl, 4-15-03, 1.0 pt./A Basagran + 1.0 pt./A Blazer, 6-22-03
  8 oz./A Select, 7-01-03, 1.25 pts./A Flexstar, 7-03-03
- Irrigation Dates: 7-09, 7-22, 8-11, 8-20
- Harvest Dates: MG4 Early: 9-26-03, MG4 Late: 10-03-03

1 Three-year averages for the MG IV Early test are calculated from the years 2000, 2002, and 2003. There were no data reported for the MG V Late tests in 2000 or 2001, however there are some 3-year averages because of differences in relative maturity groupings in past years.

Soil Series.................................Calloway silt loam
Previous Crop..............................Soybean
Row Width..................................38 inches
Fertilizer Applied........................None
Lime Applied..............................None
Planting Date.............................5-28-03
Herbicide Application....................1.0 pt./A Dual + 4 oz./A Canopy XL, 5-30-03, 0.75 pt./A Fusilade, 6-09-03, 1.5 pt./A Storm, 6-14-03
0.62 pt./A Storm, 7-07-03, 1.0 pt./A Blazer, 7-21-03, 1.0 pt./A Blazer, 7-29-03
Insecticide Application..................2.0 pts./A Methyl Parathion, 8-11-03, 2.0 pts./A Methyl Parathion, 9-07-03
Harvest Dates.............................MG4 Early: 9-29-03
MG4 Late: 10-02-03
MG5 Early: 10-12-03
MG5 Late: 10-19-03

Precipitation (inches)

\(^1\) Propanil was applied at 0.25X rate when plants were in the V4 to V5 growth stage to simulate drift from rice fields. A second rating was taken at 22 days after application, but were found to be negligible.

\(^2\) 8DAA represent ratings eight days after propanil application. Ratings by Ms. Marilyn McClelland.
