ACKNOWLEDGMENTS

This research was funded in part by participating companies. The assistance of the following individuals in conducting these experiments is gratefully acknowledged:

Northeast Research and Extension Center, Keiser
   F.M. Bourland, Center Director
   Mike Duren, Program Technician III

The Lon Mann Cotton Research Station, Marianna
   Claude Kennedy, Resident Director
   Clayton Treat, Farm Foreman

Southeast Research and Extension Center, Monticello
   Kelly Bryant, Center Director
   Larry Earnest, Superintendent, Rohwer Division
   Scott Hayes, Program Technician II, Rohwer Division
   Jack Pace, Program Technician I, Rohwer Division

Rice Research and Extension Center, Stuttgart
   Chuck Wilson, Center Director
   Jonathan McCoy, Program Technician II

Special thanks to Davis Bell for allowing us to conduct corn tests at the Bell Farming Company.
INTRODUCTION

Corn and grain sorghum performance tests are conducted each year in Arkansas by the University of Arkansas System Division of Agriculture. The tests provide information to companies marketing seed within the state, and aid the Arkansas Cooperative Extension Service in formulating recommendations for producers.

The 2015 corn performance tests contained 84 entries and were conducted at the Northeast Research and Extension Center (NEREC) at Keiser, the Lon Mann Cotton Research Station (LMCRS) near Marianna, the Bell Farming Company near Des Arc, the Rohwer Research Station (RRS) near Rohwer, and the Rice Research and Extension Center (RREC) near Stuttgart. The 2015 grain sorghum performance tests contained 30 entries and were conducted at the NEREC, the LMCRS, the RRS, and the RREC. Test location maps for grain sorghum and corn can be found on page 48 and inside the back cover, respectively.

MATERIALS AND METHODS

Corn hybrids were divided into two maturity groups based on information provided by the originating companies. Entries were placed into a 116 or fewer days-to-maturity group (Early- to Mid-Season) or 117+ group (Mid- to Full-Season).

Within each test, entries were arranged as a randomized complete block design with four replications. Plots were two rows wide and 20-25 feet long depending on location. Seeding rates for grain sorghum hybrids at all locations as well as corn hybrids at the Keiser and Rohwer locations were based on the recommendations of the originating company. A vacuum-type planter was used to plant the corn tests at the Marianna, Stuttgart, and Bell Farm locations which requires a single seeding rate. A seeding rate of 33,000 plants per acre averaged from all participant-requested plant populations was used to plant these locations. Specific location and management practice information accompany each table.

GRAIN SORGHUM PERFORMANCE MEASUREMENTS

Yield: Yields were calculated from the weight of threshed grain from each plot and are expressed as bushels per acre (bu./A) at 14% moisture.

Grain Moisture: Expressed as a percent moisture of grain at harvest.

Plant Height: Average height in inches from the soil surface to the top of the grain head.

Head Exertion: Average distance in inches from the flag leaf to base of panicle.

Head Compactness Scale:

1 = Head short and oval. Rachis branches intermediate in length.
2 = Head long and slender. Rachis branches strong and short.
3 = Head elongated and oval. Rachis branches beginning to weaken and intermediate in length.
4 = Head elongated and rectangular in shape. Rachis branches intermediate in strength and length.
5 = Head open and elongated. Rachis branches weak.

Bird Damage: A visual estimate of total percent grain loss from each plot.

CORN PERFORMANCE MEASUREMENTS

**Yield:** Yields were calculated from the weight of shelled corn harvested from each plot and are expressed as bushels per acre (bu./A) at 15.5% moisture.

**Grain Moisture:** Expressed as a percent moisture of shelled grain at harvest.

**Root Lodging:** Average number of plants leaning more than 40 degrees from vertical at harvest.

**Stalk Lodging:** Average number of plants broken below an ear at harvest.

**Plants/Acre:** The plant population expressed in the number of plants per acre.

**Ear Height:** The average distance in inches from the soil surface to the point of attachment of upper ear.

**Tip Cover:** Tip cover was rated as good (1), average (2), or poor (3). A rating of good was given when the husks reached well beyond the end of the ear and fit tightly. A rating of average was given when the husks reached the tip of the ear or fit loosely. A rating of poor was given when the ears were open to the weather.

Variety Testing Website

This report and other information about variety testing for corn, cotton, grain sorghum, rice, small grains, and soybean can be found at [ArkansasVarietyTesting.com](http://ArkansasVarietyTesting.com). Disease ratings that do not appear in this or other reports may also be found on this Website.

</table>

<sup>a</sup> Average yield for 2014 and 2015.

<sup>b</sup> Average yield for 2013, 2014, and 2015.

<sup>c</sup> Average number of plants per hybrid.

<sup>d</sup> Tip cover was rated as good (1), average (2), or poor (3). A rating of good was given when husks reached well beyond the end of the ear and fitted tightly. A rating of average was given when the husks reached the tip of the ear or fitted loosely. A rating of poor was given when ears were open to the weather.

</table>

\(^a\) Average yield for 2014 and 2015.

\(^b\) Average yield for 2013, 2014, and 2015.

\(^c\) Tip cover was rated as good (1), average (2), or poor (3). A rating of good was given when husks reached well beyond the end of the ear and fitted tightly. A rating of average was given when the husks reached the tip of the ear or fitted loosely. A rating of poor was given when ears were open to the weather.
Soil Series: Herbert silt loam
Soil pH: 7.2
Previous Crop: Soybean
Row Width: 38"
Planting Date: April 9
Irrigation Dates: June 11, 24, 30
July 14, 24
August 4
Preplant Fertilizer: 78 lb/A K, Feb. 11
Sidressed Fertilizer: 150 units 32% N, May 14, 15
Herbicide Application(s): Dual II Magnum + Atrazine + Roundup PowerMax, April 9
Fungicide Application(s): Stratego Yield, July 11
Harvest Date: September 3

</table>

<sup>a</sup> Average yield for 2014 and 2015.

<sup>b</sup> Average yield for 2013, 2014, and 2015.

<sup>c</sup> Average number of plants per hybrid.

<sup>d</sup> Tip cover was rated as good (1), average (2), or poor (3). A rating of good was given when husks reached well beyond the end of the ear and fitted tightly. A rating of average was given when the husks reached the tip of the ear or fitted loosely. A rating of poor was given when ears were open to the weather.
